S0425 - File Sharing Plus Real Time Media and Document Collaboration

Kevin Jackson (Viewpartners)

Day: Wednesday, 05/16 | **Time:** 5:30 pm - 5:55 pm

Topic Areas: Mobile Applications & Interfaces; Cloud Computing

Session Level: Beginner

Studiopass is a cloud based file sharing and visual collaboration tool which allows participants to collaborate on Microsoft documents and media files including 1080p video. It is graphic intensive and requires the best GPU performance to push playback of heavy files. This session will discuss how NVIDIA Tegra powered devices delivers the graphic and video performance needed for efficient collaboration needs and how it will bring more acceleration with the new Tegra 3 Quad Core plus 1. Studiopass collaboration is not only accelerated by Tegra devices but also leverages NVIDIA Tesla accelerated transcoding running on Amazon Web Services.
