7.139.1 Detailed Description

Compare the pixels of two images and create a binary result image.

In case of multi-channel image types, the condition must be fulfilled for all channels, otherwise the comparison is considered false. The "binary" result image is of type 8u_C1. False is represented by 0, true by NPP_MAX_8U.

7.204.1 Detailed Description

Primitives for computing the maximum error between two signals.

Given two signals $pSrc1$ and $pSrc2$ both with length N, the maximum error is defined as the largest absolute difference between the corresponding elements of two signals.

If the signal is in complex format, the absolute value of the complex number is used.

7.205.1 Detailed Description

Primitives for computing the Average error between two signals.

Given two signals $pSrc1$ and $pSrc2$ both with length N, the average error is defined as

$$AverageError = \frac{1}{N}\sum_{n=0}^{N-1}|pSrc1(n) - pSrc2(n)|$$

If the signal is in complex format, the absolute value of the complex number is used.

7.206.1 Detailed Description

Primitives for computing the MaximumRelative error between two signals.

Given two signals $pSrc1$ and $pSrc2$ both with length N, the maximum relative error is defined as

$$MaximumRelativeError = max \frac{|pSrc1(n) - pSrc2(n)|}{max(|pSrc1(n)|, |pSrc2(n)|)}$$

If the signal is in complex format, the absolute value of the complex number is used.

- NppStatus nppsAverageRelativeErrorGetBufferSize_64fc (int nLength, int ∗hpBufferSize)

  Device-buffer size (in bytes) for nppsAverageRelativeError_64fc.

7.207.1 Detailed Description

Primitives for computing the AverageRelative error between two signals.

Given two signals $pSrc1$ and $pSrc2$ both with length N, the average relative error is defined as

$$AverageRelativeError = \frac{1}{N}\sum_{n=0}^{N-1}\frac{|pSrc1(n) - pSrc2(n)|}{max(|pSrc1(n)|, |pSrc2(n)|)}$$

If the signal is in complex format, the absolute value of the complex number is used.

7.209.1 Detailed Description

Signal-allocator methods for allocating 1D arrays of data in device memory.

All allocators have size parameters to specify the size of the signal (1D array) being allocated.

The allocator methods return a pointer to the newly allocated memory of appropriate type. If device-memory allocation is not possible due to resource constaints the allocators return 0 (i.e. NULL pointer).

All signal allocators allocate memory aligned such that it is beneficial to the performance of the majority of the signal-processing primitives. It is no mandatory however to use these allocators. Any valid CUDA device-memory pointers can be passed to NPP primitives.
