

# TEGRA LINUX DRIVER PACKAGE R21.3

RN\_05071-R21 | February 26, 2015  
Advance Information | Subject to Change

## Release Notes

# TABLE OF CONTENTS

<b>1.0</b>	<b>ABOUT THIS RELEASE .....</b>	<b>3</b>
1.1	Login Credentials .....	3
1.2	What's New.....	3
1.3	Top Issues Fixed Since Last Release.....	4
1.4	Jetson TK1-Specific Releases .....	5
1.5	Sources for Included Linux Distribution Packages .....	5
<b>2.0</b>	<b>KNOWN ISSUES .....</b>	<b>6</b>
2.1	[1458105] RTSP stream playback unsuccessful.....	6
2.2	[200046014] X crashes due to segmentation fault .....	6
2.3	[200080783] X crashes during xrandr scaling .....	6
2.4	[200036737] X crashes due to invalid event .....	6
2.5	[200074271] Segmentation fault occurs when switching to video mode in nvgstcapture-1.0.....	7
2.6	[200080781] Mode setting unsuccessful for some refresh rates .....	7
2.7	[200081242] System does not wake from Suspend (LP1).....	7
2.8	[200081682] Data CRC errors displayed when using specific SD Cards for file system .....	7
2.9	[200081729] Errors display when overriding GPU frequency before display initialization.....	7
2.10	[200049185] Hue changes if object is close to camera lens.....	7
2.11	[200071832] Loop functionality of nvgstplayer-1.0 does not function correctly .....	8
2.12	[200074125] built-in sound devices not listed in Settings with HDMI-DVI convertor connected ...	8
2.13	[200081502] MSELECT error and kernel exception display during reboot stress testing .....	8
2.14	[1499936] Moving nautilus window over workspace switcher causes GUI to hang .....	8
<b>3.0</b>	<b>IMPLEMENTATION NOTES .....</b>	<b>9</b>
3.1	Gstreamer 1.0 Support .....	9

# 1.0 ABOUT THIS RELEASE

The NVIDIA® Tegra® Linux Driver Package supports development of platforms running:

- ▶ NVIDIA® Tegra® K1 32 Bit series computer-on-a-chip
- ▶ Linux kernel 3.10.40
- ▶ Git tag for the release: tegra-l4t-r21.3

**Note:** This release of Tegra Linux Driver Package R21.3 is a release for: Tegra K1 32 Bit device code-named “Jetson TK1”

## 1.1 LOGIN CREDENTIALS

The default Jetson TK1 login credentials are:

- ▶ Username: ubuntu
- ▶ Password: ubuntu

**Note:** A debug console is available via female-to-female NULL modem cable. The console is not password protected.

## 1.2 WHAT'S NEW

This release fixes some issues that were found during continued testing and adds/enhances the following feature(s).

- ▶ Implemented skip-frames and disable-dpb properties for gst-omx plugin. See *L4T Multimedia User Guide* for more information.
- ▶ Added encoding and scaling support in gst-nvvidconv-1.0. See *L4T Multimedia User Guide* for more information.
- ▶ Tegra watchdog support

- ▶ Enabled ramoops debugging support
- ▶ CSI\_B/CSI\_C support in Tegra V4L2/soc\_camera driver

## 1.3 TOP ISSUES FIXED SINCE LAST RELEASE

The following issues have been resolved in this release.

### System

- ▶ [1506870] Unnecessary debug messages from NVAVP kernel code display
- ▶ [1549799] Improved flashing tools compatibility with additional eMMC devices where boot partition size differ from Jetson TK 1
- ▶ [1561360] Intermittent "azx\_get\_response" kernel warning displays during system testing
- ▶ [1582388] Intermittent "kernel\_warning: "hda-intel azx\_get\_response timeout" warning displays during system testing
- ▶ [200015967] The error "gk20a gk20a.0: gk20a\_fifo\_handle\_sched\_error: fifo is waiting for ctx switch for 100 ms,ch = 3" may occur when running WebGL applications
- ▶ [200054390] Support RAM sizes for 4GB or greater in U-Boot
- ▶ [1551864] Updated pinmux for Jetson TK 1 devices
- ▶ [200046876] Resolved memory leak in gst-openmax
- ▶ [200067410] Resolved issues related to use of Tegra-profiler
- ▶ [200072946] Improved system stability during extended reboot stress testing
- ▶ [200020671, 200031813] Improved compatibility with HDMI TVs and resiliency for unsupported modes
- ▶ [1577947, 1435870] Improved stability of gk20a GPU driver
- ▶ [200048667] Removed debug messages when loading VIC firmware
- ▶ [200055546] Resolved gk20a stability issues regarding "gk20a\_pmu\_isr: pmu halt intr not implemented"
- ▶ [200016313] Resolved gk20a stability issues regarding "gk20a\_pmu\_enable\_elpg(): possible elpg refcnt mismatch"
- ▶ [1557711] Enabled devsleep functionality only for mSATA connectors (disable devsleep on Jetson TK 1 SATA). This resolved issues on detection of certain SATA drives
- ▶ [1566598] Improved stability of Jetson TK1 on-board Ethernet

### Camera

- ▶ [200074274] Resolved preview resolution switching with USB cameras in Nvgstcapture-1.0
- ▶ [200063275] Fixed issue with 1080p encoding in Nvgstcapture-0.10
- ▶ [200060263] Corrected preview resolution in Nvgstcapture-0.10
- ▶ [200062376] Changed default preview sink in Nvgstcapture-1.0
- ▶ [200049907] Resolved pauses during video recording specific to USB webcam in Nvgstcapture-0.10

- ▶ [200074237] Resolved cosmetic error messages when using USB cameras in Nvgstcapture-1.0

### Multimedia

- ▶ [200053327] Resolved errors in continuous encoding and decoding in libjpeg-8b hardware acceleration
- ▶ [200067781] Fixed crash in port audio
- ▶ [200045113] Improved H.264 decode latency
- ▶ [1575862, 1576116] Resolved crash in H.264 decoder when video stream contains multiple segments with different resolutions.
- ▶ [200057071] Resolved infrequent error of “X Error of failed request: BadIDChoice” in Nvgstplayer

### Power and Performance

- ▶ [200070160] 792 megahertz (Mhz) BCT needs to be updated has incorrect memory swizzle

## 1.4 JETSON TK1-SPECIFIC RELEASES

For the latest releases and errata for the Jetson TK1 platform, visit (Registered Developer Program membership required):

<http://developer.nvidia.com/jetson-tk1>

## 1.5 SOURCES FOR INCLUDED LINUX DISTRIBUTION PACKAGES

Source files for open-source licensed Linux distribution packages included in the release flashed on Jetson TK 1 as shipped are located in the following directory:

```
./usr/src/
```

You can download updated sources, when available at the following Web site:

<https://developer.nvidia.com/linux-tegra>

## 2.0 KNOWN ISSUES

This section provides details about issues that were discovered during development and QA but not resolved prior to this release of the Tegra Linux Driver Package.

### 2.1 [1458105] RTSP STREAM PLAYBACK UNSUCCESSFUL

Playing certain RTSP streams with Gstreamer-1.0 sometimes plays audio content only, and sometimes does not play back any content at all. This is an issue with the Gstreamer software.

### 2.2 [200046014] X CRASHES DUE TO SEGMENTATION FAULT

The X server crashes due to a segmentation fault during the rendercheck test suite.

### 2.3 [200080783] X CRASHES DURING XRANDR SCALING

The X server crashes during 4 x 8 xrandr scaling, displaying log messages indicating out-of-memory process.

### 2.4 [200036737] X CRASHES DUE TO INVALID EVENT

When hot-plugging certain peripherals, occasional crashes in X11 have been reported.

## 2.5 [200074271] SEGMENTATION FAULT OCCURS WHEN SWITCHING TO VIDEO MODE IN NVGSTCAPTURE-1.0

When using Nvgstcapture-1.0 with nvhdmioverlaysink and nveglglessink, image capture is successful but switching to video causes intermittent segmentation faults.

## 2.6 [200080781] MODE SETTING UNSUCCESSFUL FOR SOME REFRESH RATES

Mode settings for non-standard modes are unsuccessful for some refresh rates. Logs include "tegra\_dc\_init failure" and "pclk out of range" messages.

## 2.7 [200081242] SYSTEM DOES NOT WAKE FROM SUSPEND (LP1)

The system does not wake from Suspend (LP1) using USB interrupts with XUSB enabled.

## 2.8 [200081682] DATA CRC ERRORS DISPLAYED WHEN USING SPECIFIC SD CARDS FOR FILE SYSTEM

Data CRC errors may display when using an "Ultra microSDHC UHS-I 32GB Class 10 Memory Card" for the root file system.

## 2.9 [200081729] ERRORS DISPLAY WHEN OVERRIDING GPU FREQUENCY BEFORE DISPLAY INITIALIZATION

The GPU frequency cannot be overridden until X11 is running.

## 2.10 [200049185] HUE CHANGES IF OBJECT IS CLOSE TO CAMERA LENS

When capturing images with Nvgstcapture-1.0 the hue of the image varies with the proximity of the subject to the camera lens.

## 2.11 [200071832] LOOP FUNCTIONALITY OF NVGSTPLAYER-1.0 DOES NOT FUNCTION CORRECTLY

When playing back video content using the loop-forever feature of Nvgstplayer-1.0, playback hangs after first iteration, stopping at the first frame of the second iteration.

## 2.12 [200074125] BUILT-IN SOUND DEVICES NOT LISTED IN SETTINGS WITH HDMI-DVI CONVERTOR CONNECTED

Sound is audible, but built-in sound devices are missing from settings when system is connected to a display with a HDMI-DVI converter.

## 2.13 [200081502] MSELECT ERROR AND KERNEL EXCEPTION DISPLAY DURING REBOOT STRESS TESTING

MSELECT errors and kernel exception are displayed at `/dvs/git/dirty/git-master_linux/kernel/drivers/platform/tegra/hier_ictlr/hier_ictlr.c:54` during reboot stress testing. This issue occurs extremely infrequently.

## 2.14 [1499936] MOVING NAUTILUS WINDOW OVER WORKSPACE SWITCHER CAUSES GUI TO HANG

Dragging a Nautilus window so that it covers or partially covers the workspace switcher causes the desktop GUI to hang.

## 3.0 IMPLEMENTATION NOTES

### 3.1 GSTREAMER 1.0 SUPPORT

This release includes Gstreamer 1.0 support. The Nvgstplayer application defaults to Gstreamer 0.1. To run the 1.0 version, use the full path to the binary.

### **Notice**

ALL NVIDIA DESIGN SPECIFICATIONS, REFERENCE BOARDS, FILES, DRAWINGS, DIAGNOSTICS, LISTS, AND OTHER DOCUMENTS (TOGETHER AND SEPARATELY, "MATERIALS") ARE BEING PROVIDED "AS IS."
