This section provides a procedure for building current versions of gstreamer.

**Using gst-install to build GStreamer**

This release contains the `git-install` script to install a specific GStreamer version. To install, execute:

```
gst-install [--prefix=<install_path>] [--version=<version>]
```

Where:

- `<install_path>` is the location where you are installing GStreamer
- `<version>` is the GStreamer version

For example:

```
gst-install --prefix=/home/ubuntu/gst-1.6.0 --version=1.6.0
```

**To build GStreamer manually**

1. Download the latest version of gstreamer available at:

   The following are the files you need from version 1.6.0:

   - gstreamer-1.6.0.tar.xz
   - gst-plugins-base-1.6.0.tar.xz
   - gst-plugins-good-1.6.0.tar.xz
   - gst-plugins-bad-1.6.0.tar.xz
   - gst-plugins-ugly-1.6.0.tar.xz
2. Install needed packages with the following command:

```bash
sudo apt-get install build-essential dpkg-dev flex bison autotools-dev automake liborc-dev autopoint libtool gtk-doc-tools libgstreamer1.0-dev
```

3. In the ~/ directory, create a `gst_<version>` directory, where `<version>` is the version number of gstreamer you are building.

4. Copy the downloaded tar.xz files to the `gst_<version>` directory.

5. Uncompress the tar.xz files in the `gst_<version>` directory.

6. Set the `PKG_CONFIG_PATH` with the following command:

```bash
export PKG_CONFIG_PATH=/home/ubuntu/gst_1.6.0/out/lib/pkgconfig
```

7. Build gstreamer (in this example, gstreamer-1.6.0) with the following commands:

```bash
./configure --prefix=/home/ubuntu/gst_1.6.0/out
make
make install
```

8. Build `gst-plugins-base-1.6.0` with the following commands:

```bash
sudo apt-get install libxv-dev libasound2-dev libtheora-dev libogg-dev libvorbis-dev
./configure --prefix=/home/ubuntu/gst_1.6.0/out
make
make install
```

9. Build `gst-plugins-good-1.6.0` with the following commands:

```bash
sudo apt-get install libbz2-dev libv4l-dev libvpx-dev libjack-jackd2-dev libsoup2.4-dev libpulse-dev

sudo apt-get install faad libfaad-dev libfaac-dev
./configure --prefix=/home/ubuntu/gst_1.6.0/out
make
make install
```

sudo apt-get install libx264-dev libmad0-dev
./configure --prefix=/home/ubuntu/gst_1.6.0/out
make
make install

12. Set the LD_LIBRARY_PATH environment variable with the following command:

```bash
echo $LD_LIBRARY_PATH
export LD_LIBRARY_PATH=/home/ubuntu/gst_1.6.0/out/lib/
```

13. Copy the nvidia gstreamer-1.0 libraries to the gst_1.6.0 plugin directory using the following command:

```bash
cd /usr/lib/arm-linux-gnueabihf/gstreamer-1.0/
cp libgstnv* libnvgs* libgstomx.so ~/gst_1.6.0/out/lib/gstreamer-1.0/
```

The nvidia gstreamer-1.0 libraries include:

- libgstnvcamera.so
- libgstnveglglessink.so

**NOTES**

- The nvgstcapture-1.0 application generates image and video output files in the same directory as the application itself.
- Filenames for image and video content are in the formats nvcamtest<counter>.jpg and nvcamtest<counter>.mp4 respectively, where <counter> is a counter starting from 0 every time you run the application. Rename or move files between runs to avoid overwriting results you want to save.
- Default H.263 encode resolution is 704x576(4CIF) in AVI container formats.Use --camsrc=2 for H.263 video encode.
- The nvgstcapture-1.0 application supports native capture(video only) mode by default.
- Advance features, like setting zoom, brightness, exposure, and whitebalance levels, are not supported for USB camera.
Gstreamer-1.0 and gstreamer-0.10 support the following features, respectively:

<table>

<tr>

SUPPORTED CAMERAS

This section describes the supported cameras.

CSI CAMERAS

- Jetson TX1 currently supports only 1 CSI RAW BAYER sensor.
- The platform has been validated with a single OV5693 sensor for capture on L4T.
- The camera module is interfaced with the Tegra platform via MIPI-CSI.
- Tested using the nvgstcapture application.

USB 2.0 CAMERAS

The following cameras have been validated on Tegra platforms for Android and L4T with USB 2.0 ports. These cameras are UVC compliant.

- Logitech c920 (preferred)
  

- Logitech c910

INDUSTRIAL CAMERA DETAILS

The following USB 3.0 Industrial cameras are supported on Jetson-TX1 under L4T:

- **See3CAM_CU130**
  
  
  - USB 3.0
  - UVC compliant
  - 3840 x 2160 at 30 FPS | 4224 x 3156 at 13 FPS
  - Purpose - Embedded Navigation
  - Test using the `nvgstcapture` app.
  - Issues encountered:
    - FPS cannot be fixed. Changes based on exposure.
    - FPS cannot be changed. Needs payment to vendor to get the support added to their firmware.

- **MQ003CG-CM**
  
  
  - USB 3.0
  - Non-UVC compliant
  - 640 x 480 at 500 FPS
  - Purpose - Embedded Robotics
  - Installation and Verification on Jetson TX1:

  1. Add the user to the plugdev group:
     
     ```
     sudo gpasswd -a ubuntu plugdev
     ```
     
     Re-login.

  2. Install tools for the application:
     
     ```
     apt-get install libgstreamer0.10-dev libgstreamer-plugins-base0.10-dev libgtk2.0-dev g++
     ```

  3. Download XIMEA Linux Software Package:
     
     ```
     wget http://www.ximea.com/downloads/recent/XIMEA_Linux_SP.tgz
     ```
     
     Untar:
     
     ```
     tar xzf XIMEA_Linux_SP.tgz
     cd package
     ```
4. Open the install file and replace

```
elif [ "${arch:0:3}" == "arm" ]
```
with

```
elif [ "$arch" == "aarch64" ]
```

5. Start installation:

```
./install
```

Install USB3 camera:

```
./install -cam_usb30
```

Install graphical desktop:

```
sudo apt-get update
sudo apt-get install ubuntu-desktop
```

6. Reboot. The system boots to the graphical desktop.

7. To access sample apps:

- **xiSample**: run from `/package/bin` folder
- **streamViewer**
  - `make` from `/package/examples/streamViewer` folder
  - `run` from the `/package/bin` folder
