Supported H.264/H.265 Encoder Features with Gstreamer-1.0

This section describes example `gst-launch-1.0` usage for features supported by the NVIDIA accelerated H.264/H.265 encoder.

Note: Display detailed information on `omxh264enc` or `omxh265enc` encoder properties with the `gst-inspect-1.0 [omxh264enc | omxh265enc]` command.

Set I-frame interval

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
iframeinterval=100 ! qtmux ! filesink location=test.mp4 -e
```

Set temporal-tradeoff (the rate the encoder should drop frames)

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
temporal-tradeoff=1 ! qtmux ! filesink location=test.mp4 -e
```

Configuring temporal tradeoff causes the encoder to intentionally, periodically, drop input frames. The following modes are supported:

Mode	Description
0	Disable
1	Drop 1 in 5 frames
2	Drop 1 in 3 frames
3	Drop 1 in 2 frames
4	Drop 2 in 3 frames

Set rate control mode

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
control-rate=1 ! qtmux ! filesink location=test.mp4 -e
```

The following modes are supported:

Mode	Description
0	Disable
1	Variable bit rate
2	Constant bit rate

3	Variable bit rate with frame skip. The encoder skips frames as necessary to meet the target bit rate.
4	Constant bit rate with frame skip

Set quantization range for I, P and B frame

The format for the range is the following:

```
"<I_range>:<P_range>:<B_range>"
```

Where <I_range>, <P_range> and <B_range> are each expressed as hyphenated values, as shown in the following example:

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc qp-
range="10,30:10,35:10,35" ! qtmux ! filesink location=test.mp4 -e
```

The range of B frames does not take effect if the number of B frames is 0.

Set hardware preset level

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
quality-level=0 ! qtmux ! filesink location=test.mp4 -e
```

The following modes are supported:

Mode	Description
0	UltraFastPreset
1	FastPreset Only Integer Pixel (integer-pel) block motion is estimated. For I/P macroblock mode decision, only Intra 16 x 16 cost is compared with Inter modes costs. Supports Intra 16 x 16 and Intra 4 x 4 modes.
2	MediumPreset Supports up to Half Pixel (half-pel) block motion estimation. For an I/P macroblock mode decision, only Intra 16 x 16 cost is compared with Inter modes costs. Supports Intra 16 x 16 and Intra 4 x 4 modes.
3	SlowPreset Supports up to Quarter Pixel (Qpel) block motion estimation. For an I/P macroblock mode decision, Intra 4 x 4 as well as Intra 16 x 16 cost is compared with Inter modes costs. Supports Intra 16 x 16 and Intra 4 x 4 modes.

Set profile

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
profile=8 ! qtmux ! filesink location=test.mp4 -e
```

From omxh264enc, the following profiles are supported:

Profile	Description
1	Baseline profile
2	Main profile
8	High profile

Set number of B frames between two reference frames

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
num-B-Frames=2 ! qtmux ! filesink location=test.mp4 -e
```

Note: B-frame-encoding is not supported with omxh265enc.

Insert SPS and PPS at IDR

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
insert-sps-pps=1 ! qtmux ! filesink location=test.mp4 -e
```

If enabled, a sequence parameter set (SPS) and a picture parameter set (PPS) are inserted before each IDR frame in the H.264/H.265 stream.

Enable two-pass CBR

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
EnableTwopassCBR=1 control-rate=2 ! qtmux ! filesink location=test.mp4
-e
```

Two-pass CBR must be enabled along with constant bit rate (control-rate=2).

Set virtual buffer size

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
vbw-size=10 ! qtmux ! filesink location=test.mp4 -e
```

If the buffer size of decoder or network bandwidth is limited, configuring virtual buffer size can cause video stream generation to correspond to the limitations according to the following formula:

```
virtual buffer size = vbv-size * (bitrate/fps)
```

Slice-header-spacing with spacing in terms of MB

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
slice-header-spacing=200 bit-packetization=0 ! qtmux ! filesink
location=test.mp4 -e
```

The parameter `bit-packetization=0` configures the network abstraction layer (NAL) packet as macroblock (MB)-based, and `slice-header-spacing=200` configures each NAL packet as 200 MB at maximum.

Slice header spacing with spacing in terms of number of bits

```
gst-launch-1.0 videotestsrc num-buffers=200 ! 'video/x-raw,
width=(int)1280, height=(int)720, format=(string)I420' ! omxh264enc
slice-header-spacing=1024 bit-packetization=1 ! qtmux ! filesink
location=test1.mp4 -e
```

The parameter `bit-packetization=1` configures the network abstraction layer (NAL) packet as size-based, and `slice-header-spacing=1024` configures each NAL packet as 1024 bytes at maximum.

GSTREAMER BUILD INSTRUCTIONS

This section provides a procedure for building current versions of gstreamer.

Using gst-install to build GStreamer

This release contains the `gst-install` script to install a specific GStreamer version. To install, execute:

```
gst-install [--prefix=<install_path>] [--version=<version>]
```

Where:

- ▶ `<install_path>` is the location where you are installing GStreamer
- ▶ `<version>` is the GStreamer version

For example:

```
gst-install --prefix=/home/ubuntu/gst-1.6.0 --version=1.6.0
```

To build GStreamer manually

1. Download the latest version of gstreamer available at:

<http://gstreamer.freedesktop.org/src/>

The following are the files you need from version 1.6.0:

- `gstreamer-1.6.0.tar.xz`
- `gst-plugins-base-1.6.0.tar.xz`
- `gst-plugins-good-1.6.0.tar.xz`
- `gst-plugins-bad-1.6.0.tar.xz`
- `gst-plugins-ugly-1.6.0.tar.xz`

sudo apt-get install libxv-dev libasound2-dev libtheora-dev libogg-  
dev libvorbis-dev  
./configure --prefix=/home/ubuntu/gst_1.6.0/out  
make  
make install
```

```
export LD_LIBRARY_PATH=/home/ubuntu/gst_1.6.0/out/lib/
```

13. Copy the `nvidia gstreamer-1.0` libraries to the `gst_1.6.0` plugin directory using the following command:

```
cd /usr/lib/arm-linux-gnueabi/hf/gstreamer-1.0/
cp libgstnv* libnvgst* libgstomx.so ~/gst_1.6.0/out/lib/gstreamer-1.0/

NOTES

- ▶ The nvgstcapture-1.0 application generates image and video output files in the same directory as the application itself.
- ▶ Filenames for image and video content are in the formats `nvcamtest<counter>.jpg` and `nvcamtest<counter>.mp4` respectively, where `<counter>` is a counter starting from 0 every time you run the application. Rename or move files between runs to avoid overwriting results you want to save.
- ▶ Default H.263 encode resolution is 704x576(4CIF) in AVI container formats. Use `--camsrc=2` for H.263 video encode.

- ▶ The nvgstcapture-1.0 application supports native capture(video only) mode by default.
- ▶ Advance features, like setting zoom, brightness, exposure, and whitebalance levels, are not supported for USB camera.
